PenTack® is the main product of Eshacold Danmark A/S. Since 1992 we have maintained and kept a lot of different road and airport surfaces in good condition in Northern and Western Europe. PenTack® extends the lifetime of the pavement and reduces the maintenance costs.

We have technical support by our experts;
inspection of your pavements;
maintenance strategies with PenTack®;
external and in-house seminars;
case studios;
technical documentation;
reference lists available for you

PenTack® is a mixture of special bitumen emulsions with an activating component. This penetrates into the upper layer of the asphalt and regenerates the properties of the aged bitumen.

Together with the bitumen in the PenTack® emulsion, the penetration value of the bitumen in the asphalt is brought back to app. its original value.

The binder's flexibility and adhesive capacity are restored and further loss of mortar and stones is prevented.

Goods are supplied in accordance with our general terms and conditions, copy of which can be supplied on demand A/S reg. no. 234-064

PRODUCTS

PenTack treatment for asphalt surfaces.

Cold applied crack filling.
